नाड़ी . *the pulse*

*Reading the financial pulse of businesses
the balance sheet never sees.*

An AI-native **MSME Financial Health Card** and **Munshi**, an agentic underwriting copilot — GST · UPI · Account Aggregator · EPFO, fused into a score, a reason, a decision, and a memo.

India's credit engine reads balance sheets.

Most of India's businesses don't have one.

New-to-Credit ≠ not creditworthy. The borrowers exist. The data exists. The bridge doesn't. NAADI is the bridge.

One pulse, five superpowers.

Most entries train a model and show a number. A number is not a product — NAADI closes the whole loop.

VALIDATED, HONESTLY

AUROC 0.871 KS 0.576

Held-out, on a 5,000-MSME synthetic population — **architecture proof, not a market claim**. Default is rare; raw “accuracy” is a broken yardstick, and we'll defend why.

Deterministic where it must be.

Agentic where it pays.

THE TYPICAL ENTRY	NAADI
One opaque score	Six explainable dimensions + 300–900 with an honest ± band
“Trust the model”	TreeSHAP reason codes — committee-ready, adverse-action-ready
Stops at scoring	Munshi drafts the full memo — decision, limit, covenants, triggers
Rejects thin files	Tier system widens uncertainty instead of penalising data poverty
Score as a verdict	What-if paths turn declines into financial literacy
Origination only	Rolling radar = monitoring free — a bridge into Track 04
Slideware “integration”	Working decision API + ULI/OCEN-native design, live today

INCLUSION, ENGINEERED

Every decline ships with a comeback plan. Declined-today **≠ lost-forever** — that is Track 03's financial-inclusion mandate, shipped as software.

*Most teams will show the judges a model. **We're handing the bank a product** — scored, explained, stress-tested, memo signed, radar armed.*
